Instructions

- For each product in the csv file we will need an image that follows this format:
  i. File size less than 2MB
  ii. Image size less than 1250 pixels by 1250 pixels
  iii. Images with a white background and only the product displayed is strongly preferred

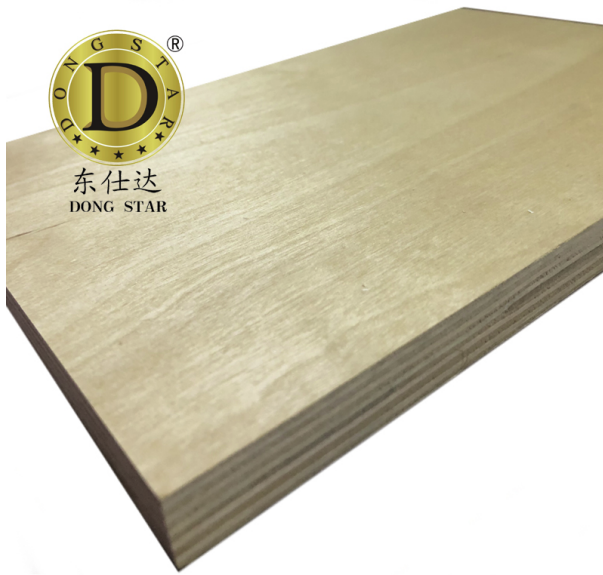

✅

- The csv provided contains the following fields:
  SKU (applicable, will be provided)
  Product Name (applicable, will be provided)

These fields can be utilized to find the correct product image online.

- Search online for an image. Google Images would be a good place to start!

- Once an image is sourced, save the image in **JPEG, JPG or PNG** format to a zip file and rename each image to the corresponding product's SKU number, ensuring there are no spaces between characters. The zip file containing all product images will be sent over

Tips

-Please do not source images that contain a seal or brand information:

✕

-Please avoid sourcing from Home Depot for images this includes either
https://www.homedepot.ca or https://www.homedepot.com
-**Brand & Manufacturer** are also possible ways you can source these images from online.
Brand & Manufacturer information is sometimes found in the product name
-**Loom video for more context in finding an image match:**
https://www.loom.com/share/9a71b697530248208cc6c3afcfb8e0ce

Happy Image Sourcing!
